Attn: Mr. Pete Held

Good Morning Mr. Held:

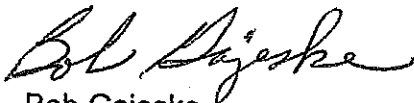

We have now had the pleasure of being in our building for a summer and a winter.

Both seasons were comfortable due to the use of your "Low E" 1/4" insulation that was placed under the skin of the metal building.

There is also a saving of electricity for lighting due to our painting of the structural steel and the reflectivity of the foil backing on the polyethylene foam insulation. Of course we have wall lights (translucent panels) in the walls also.

We are very pleased with your Low E insulation product. We made a wise decision to use this product.

Sincerely,

Bob Gajeske
President
